7. Problems Fixed in this Release 13

Introduction

This document contains the release notes for the Java Card™ 2.1.1 Development Kit.

You can use this release to:

- View and experiment with the reference implementation of:
 - Java Card 2.1.1 Converter tool.
 - Java Card 2.1.1 capgen tool.
 - Java Card 2.1.1 Java Card Workstation Development Environment (JCWDE) Simulator.
 - Java Card 2.1.1 AduTool utility.
 - Java Card 2.1.1 Framework Classes.
- Exercise the reference implementation to:
 - Convert the sample applet packages and build a CAP file using the Converter tool.
 - Run the virtual machine in JCWDE and exercise the installer applet to install a set of sample applets and libraries.

The Java Card 2.1.1 Development Kit tools run on a workstation using a Java Virtual Machine (VM). UNIX and Windows NT versions are available for this release.

For more details on the reference implementation, please refer to the *Java Card™ 2.1.1 Development Kit User's Guide*.

Contents of this Release

This release contains:

- The Java Card 2.1.1 `Converter` tool reference implementation pre-built binary.
- The Java Card 2.1.1 `capgen` tool reference implementation pre-built binary.
- The Java Card 2.1.1 Workstation Development Environment (`JCWDE`) Reference Implementation Pre-Built Binary.
- The Java Card 2.1.1 `ApuTool` utility reference implementation pre-built binary.
- The Java Card 2.1.1 Framework and sample packages to run against the cJDK.
- Java Card 2.1.1 Development Kit User's Guide.

Java Card™ 2.1.1 Development Kit Release

This chapter describes what is and what is not included in this release.

The major components are the Java Card 2.1.1 tools reference implementation pre-built executables, and the example applets, including source code and pre-built executables.

These tools implement the *Java Card™ 2.1.1 Virtual Machine Specification*

The Java Card 2.1.1 Development Kit Tools Reference Implementation Executables

The executables in the `bin` directory are the UNIX shell scripts or the MS Windows batch files for running the `jcwde`, the `converter`, the `capgen` tool, the `apdutool` utility, and their corresponding `jar` files.

The Java Card 2.1.1 Framework and Sample Applets

The `api21` directory comprises the Java Card 2.1.1 `java.lang` package and a complete implementation of the Java Card 2.1.1 `javacard.framework` package. `jcwde` comprises the workstation development environment scaffolding code to allow Java Card applet development on a workstation. `samples` includes five sample Java Card 2.1.1 applets: `NullApp`, a basic applet which only returns error status; `HelloWorld`, a command APDU echo applet; `Wallet`, a simple electronic purse; `JavaPurse`, a smart card cash applet; `JavaLoyalty`, a loyalty applet which interacts with `JavaPurse`; and `SampleLibrary`, which contains the shared interface between `JavaPurse` and `JavaLoyalty`.

Quality Assurance

Testing

This release has been installed and tested on Win NT 4.0 and Solaris 7 systems, using Sun's JDK 1.2.2.

Converter

The Java Card `Converter` supports class file format of versions in the range 45.0 through 45.65535 inclusive, in a manner similar to the Sun's JDK release 1.1.8.

Known Bugs in this Release

The following table lists identified bugs in this release with a moderate (3) to low (5) bug severity level.

TABLE 4-1 Known Bugs in This Release.

| Bug Id | Component | Synopsis | Severity |
|---------|-----------|---|----------|
| 4333022 | Converter | converter doesn't handle correctly "wide" bytecode. | 5 |
| 4334192 | Converter | Incorrect jca-file is created by converter for simple method with try-finally block. | 5 |
| 4337394 | Converter | Converter doesn't check that 'AID' and 'version' parameters are byte-length values. | 5 |
| 4337404 | Converter | Converter doesn't check that applet's RID is the same as package's RID (JCVM Specification, 6.5). | 5 |
| 4337405 | Converter | The same AID can be assigned to more than one applet in the package. | 5 |
| 4337406 | Converter | The same AID can be assigned to applet and its package. | 5 |
| 4337407 | Converter | More than one AID can be assigned to applet. | 5 |
| 4322301 | Installer | installer cannot handle initialization of static array of 0 element | 3 |

New Features in this Release

Converter

The Java Card `Converter` tool has been enhanced, allowing you to do generate CAP files in one step.

Known Limitations in this Release

General

The reference implementation does not include the `javacardx.crypto` API packages.

The reference implementation does not support default Java Card applet packages. Applet and library packages must be named.

API

javacardx.crypto

- binaries are not included.

javacard.security

- `getInstance()` methods of `KeyBuilder`, `MessageDigest`, `Signature` and `RandomData` throw `NO_SUCH_ALGORITHM` exception.

Converter

The class files input to the `converter` must have been compiled with the `-g` option.

Static fields can only be initialized to primitive compile-time constant values, or arrays of primitive compile-time constants. The `converter` supports static field initialization as in the following formats:

```

public static byte a = 1;
protected static short b = 4;
private static int c = 0xFFFF;
public static byte[] d = {1, 2, 3};
public static final short[] = { 0x11, 0x22, 0x33 };
public static int[] = new int[5];

```

The converter reports errors on other formats of static field initialization and static field initialization types that are not compliant to the *Java Card™ 2.1.1 Virtual Machine Specification*.

For instance, the following code is not currently supported:

```

public static int[] a;
static {
a = new int[3]; for (int i = 0; i < 3; i++)
a[i] = i;
}

```

JCWDE

- No transactions or firewall.
- No download; All applets configured in mask.
- Execution simulates first time power up of card.

Problems Fixed in this Release

The following table lists the problems fixed in this release.

TABLE 7-1 Problems Fixed in This Release.

| Bug Id | Component | Synopsis |
|---------|--------------------|---|
| 4294687 | converter | capgen fails on class with abstract method when param type external |
| 4300131 | converter | CAP file format: Descriptor component & directory component |
| 4308473 | converter | capgen problem with field tokens |
| 4314190 | converter | public static final byte[] b={(byte)0x10} and jcasml.jar |
| 4334148 | converter | capgen is unable to resolve SuperMethodref_info constant pool entry for method with package visibility. |
| 4329152 | installer | Installer error codes start with 0x60 which is not ISO compliant. |
| 4329162 | installer | Installer instruction byte (INS) values are not ISO compliant. |
| 4275845 | ref implementation | SecurityException is thrown when an applet calls APDU.waitExtension() |
| 4290768 | ref implementation | OwnerPIN class constructor does not flag PIN length <=0 |
| 4310578 | ref implementation | Java Card jcdk APDU buffersize limitation |
| 4334071 | ref implementation | jcwde should print better diagnostic message on SW=0,0 status return |

| Bug Id | Component | Synopsis |
|---------|-----------|--|
| 4262908 | tools | Java Card jcasm.jar javacc source code should be upgraded to a supported version |
| 4260612 | tools | capgen fails with java.io.FileNotFoundException |
| 4267701 | tools | capgen does not handle properly statically initialized arrays of 0 or 1 element |
| 4291937 | tools | bug in the reference location component of capgen |
